Confirmation No.: 2287 CAM-BASED SEARCH ENGINES THAT SUPPORT PIPELINED MULTI-DATABASE

SEARCH OPERATIONS USING REPLACEMENT SEARCH KEY SEGMENTS

Date: May 31, 2006

Mail Stop 16 Director of the U.S. Patent and Trademark Office P.O. Box 1450 Alexandria, VA 22313

REQUEST FOR REFUND OF FEES UNDER 37 C.F.R. §1.26 AND 37 C.F.R. §1.28(a)

Sir:

For:

Applicants respectfully submit this Request for Refund of Fees pursuant to 37 C.F.R. §1.26 in the amount of \$180.00. On May 8, 2006, Applicants filed an Amendment, which included copies of Acknowledgement Receipts and Electronic Information Disclosure Statements (IDSs) filed electronically with the U.S. Patent and Trademark Office on March 5, 2004 and February 2, 2005 (Appendix A).

As noted on the Deposit Account Statement on May 18, 2006 (Appendix B), the USPTO charged Deposit Account Number 50-0220 in the amount of \$180.00 for fees associated with the submission of an Information Disclosure Statement. However, copies of these previously filed IDSs (attached to our Amendment of May 8, 2006), were provided as a convenience to the Examiner for consideration of the references cited and return of the initialed Electronic Information Disclosure Statements.

Accordingly, no fee is believed to be due. Applicants respectfully submit that the fee of \$180.00 was erroneously charged and requests a refund in the amount of \$180.00 to Deposit Account No. 50-0220.

Respectfully submitted

AMENDMENT A

Sir:

This response addresses the Official Action of May 1, 2006.

Page 2

In the Claims:

1. (Currently amended) An integrated circuit device, comprising:
a search engine that supports is configured to support a plurality of
consecutive search operations in a corresponding plurality of databases within an
internal CAM core using a corresponding plurality of search keys, said plurality of
search keys comprising:

a first search key that requires at least one data cycle to load into said search engine before a first search of a first one of the plurality of databases is performed using a first search word derived from the first search key; and

a second search key that comprises a replacement search key segment and at least one search key segment from the first search key.

- 2. (Original) The device of Claim 1, wherein the plurality of consecutive search operations comprises a second search of a second one of the plurality of databases using a second search word derived from the second search key.
- 3. (Original) The device of Claim 2, wherein the second search key is shorter than the first search key.
- 4. (Original) The device of Claim 2, wherein none of the plurality of search keys is longer than the first search key.
- 5. (Original) The device of Claim 2, wherein the replacement search key segment requires one data cycle to load into said search engine.

Page 3

- 6. (Original) The device of Claim 5, wherein the plurality of search keys comprise a third search key that comprises another replacement search key segment and at least one search key segment from the first search key; wherein the another replacement search key segment requires one data cycle to load into said search engine; and wherein the another replacement search key segment is loaded into said search engine after the replacement search key segment is loaded into said search engine.
- 7. (Original) The device of Claim 6, wherein the replacement search key segment and the another replacement search key segment have equivalent values.
- 8. (Original) The device of Claim 7, wherein the plurality of consecutive search operations comprises a third search of a third one of the plurality of databases using a third search word derived from the third search key; and wherein the second and third search words are different.
- 9. (Currently amended) The device of Claim 2, wherein the first search key requires multiple data cycles to load into said search engine; and wherein the replacement search key segment requires fewer than the multiple data cycles to load into said search engine.

Page 4

10. (Currently amended) An integrated circuit device, comprising:

a search engine that <u>supports</u> is <u>configured to support</u> a plurality of consecutive search operations in a corresponding plurality of databases within an internal CAM core using a corresponding plurality of search keys, said plurality of search keys comprising:

a first search key that requires at least one data cycle to load into said search engine before a search of a first of the plurality of databases is performed using a search word that is derived from the first search key; and

a second search key that comprises at least one search key segment from the first search key and another search key segment that is loaded into said search engine after the first search key.

- 11. (Original) The device of Claim 10, wherein the plurality of consecutive search operations comprises a second search of a second one of the plurality of databases using a second search word derived from the second search key.
- 12. (Original) The device of Claim 11, wherein the second search key is longer than the first search key.
- 13. (Original) The device of Claim 11, wherein the another search key segment requires one data cycle to load into said search engine.

Page 5

14. (Currently amended) An integrated circuit device, comprising:

a search engine that <u>supports</u> is configured to support a plurality of consecutive search operations in a corresponding plurality of databases within an internal CAM core, using a corresponding plurality of search keys that include a longest first search key that requires multiple cycles to load into said search engine before a search of a first of the plurality of databases is performed and at least one shortest search key that requires fewer than the multiple cycles to load into said search engine and comprises a replacement search key segment and at least one search key segment <u>derived</u> from the <u>longest</u> first search key.

15. (Currently amended) An integrated circuit device, comprising:
a search engine that <u>supports</u> is configured to support a plurality of
consecutive search operations in a corresponding plurality of databases within an
internal CAM core using a corresponding plurality of search keys, said plurality of
search keys comprising:

a first search key that requires multiple data cycles to load into said search engine before a first search of a first one of the plurality of databases is performed;

a second search key that comprises a first replacement search key segment and at least a first search key segment <u>derived</u> from the first search key; and

a third search key that comprises a second replacement search key segment and at least a second search key segment <u>derived</u> from the first search key.

- 16. (Currently amended) The device of Claim 15, wherein the first search key segment from the first search key and the second search key segment from the first search key are equivalent search key segments.
- 17. (Original) The device of Claim 15, wherein the first replacement search key segment requires only one data cycle to load into said search engine.

Page 6

18. (Original) The device of Claim 17, wherein the second replacement search key segment is loaded into said search engine after the first replacement search key is loaded into said search engine.

Claims 19-25 (Canceled).

26. (New) A method of operating a search engine device, comprising the steps of:

searching one or more databases within the search engine device using a first search key that takes multiple data cycles to load into the search engine device; and then

searching one or more databases within the search engine device using a second search key that is unequal to the first search key and comprises a search key segment from the first search key and a replacement search key segment that is loaded into the search engine device after the first search key has been loaded into the search engine device.

27. (New) The method of Claim 26, wherein the replacement search key segment requires one data cycle to load into the search engine device.

Page 7

REMARKS

Applicants appreciate the examination of the application that is evidenced by the Official Action of May 1, 2006. In response, Applicants have amended Claims 1, 9-10 and 14-15 to address the section 112 issues raised by the Examiner. Claims 26-27 have also been added.

However, Claim 17 has not been amended because the distinction between the "replacement search key segment" and the "first search key" is correctly recited. As described throughout the application, according to an embodiment of the invention, the "first search key", which typically comprises multiple search key segments, requires multiple data cycles to load into the search engine (because it is a full-length key (see, e.g., FIGS. 6A-6C and page 17, 1st paragraph)), but the replacement search key segment may require only a single data cycle to load into the search engine:

In order to prevent the CAM interface from being a bottleneck to system performance, the plurality of databases within the CAM core 54 may be searched using variations of a primary search key. Thus, it becomes unnecessary to repeatedly load the entire contents of each search key across the CAM interface for each search operation within a respective database. Instead, during the fourth through tenth cycles illustrated by FIG. 6A, the shorter replacement search key segments associated with the second through eighth search operations may be loaded into the search engine 50. These replacement search key segments, which are illustrated as REPLACEMENT KEY SEGMENTS 0-6, may be combined with one or more segments of the primary search key (or other search key) to define a desired search key for a respective search operation. This search key may constitute a search word (i.e., comparand) that is applied to a database within the CAM core or, more typically, the search key may be modified by a global mask stored within the search engine. Moreover, whereas FIG. 6A illustrates that a respective single cycle may be required to receive the multi-database search instruction and to receive each of the search key segments, alternative embodiments may use a fewer or larger number of cycles depending on the bandwidth requirements and capabilities of a particular system. ('353 application, page 17, underline added).

Page 8

In view of the above claim amendments and explanation of Claim 17, Applicants respectfully submit that all claims are now in condition for allowance.

Applicants also note that the Office Action does not indicate consideration of Applicant's Information Disclosure Statements (IDSs) submitted electronically on March 5, 2004 and February 2, 2005, copies of which are attached, along with a copy of the acknowledgment receipts. Applicants respectfully request consideration of the references cited in the IDSs and return of copies of the initialed forms PTO-1449 indicating such consideration.

The Examiner is encouraged to contact the undersigned by telephone at 919-854-1407 in the event any issues remain which may prevent issuance of the present application.

Respectfully submitted

Grant J. Scott
